SOLUTIONS

INTERNAL LOGISTICS SYSTEM

INTERNAL LOGISTICS MANAGEMENT
SOLUTION WITH REAL-TIME
OVERVIEW AND NAVIGATION

MORE EFFICIENT WORK AND LOWER COSTS

- Optimizes delivery and collection routes within the company (plant, building) and also between fixed predefined locations according to the schedule
- Efficiently utilizes logistics specialists and transport means (carts, trucks)
- Enables management and clear navigation for logisticians
- Allows hands-free operation
- Plans both one-time and regular collections, which are grouped and assigned to logisticians
- Ensures reward based on KPIs

COMPREHENSIVE
MANAGEMENT OF
INTERNAL
LOGISTICS

+30%

work efficiency

-90%

minimization of errors

-85%

training time

MOST COMMON PROBLEMS:

- Material delivered to the wrong place
- Unreceived requests
- Delayed delivery
- Inefficient routes and goods distribution

SOLUTIONS:

- Recording all movements of goods and shipments
- Accurate tracking of transport requests
- Control of each operation through scanning
- Clear identification of logistics points, carts, and packages
- Control of delivered goods according to the order
- Automated process of assigning requests
- Monitoring the current position of the cart

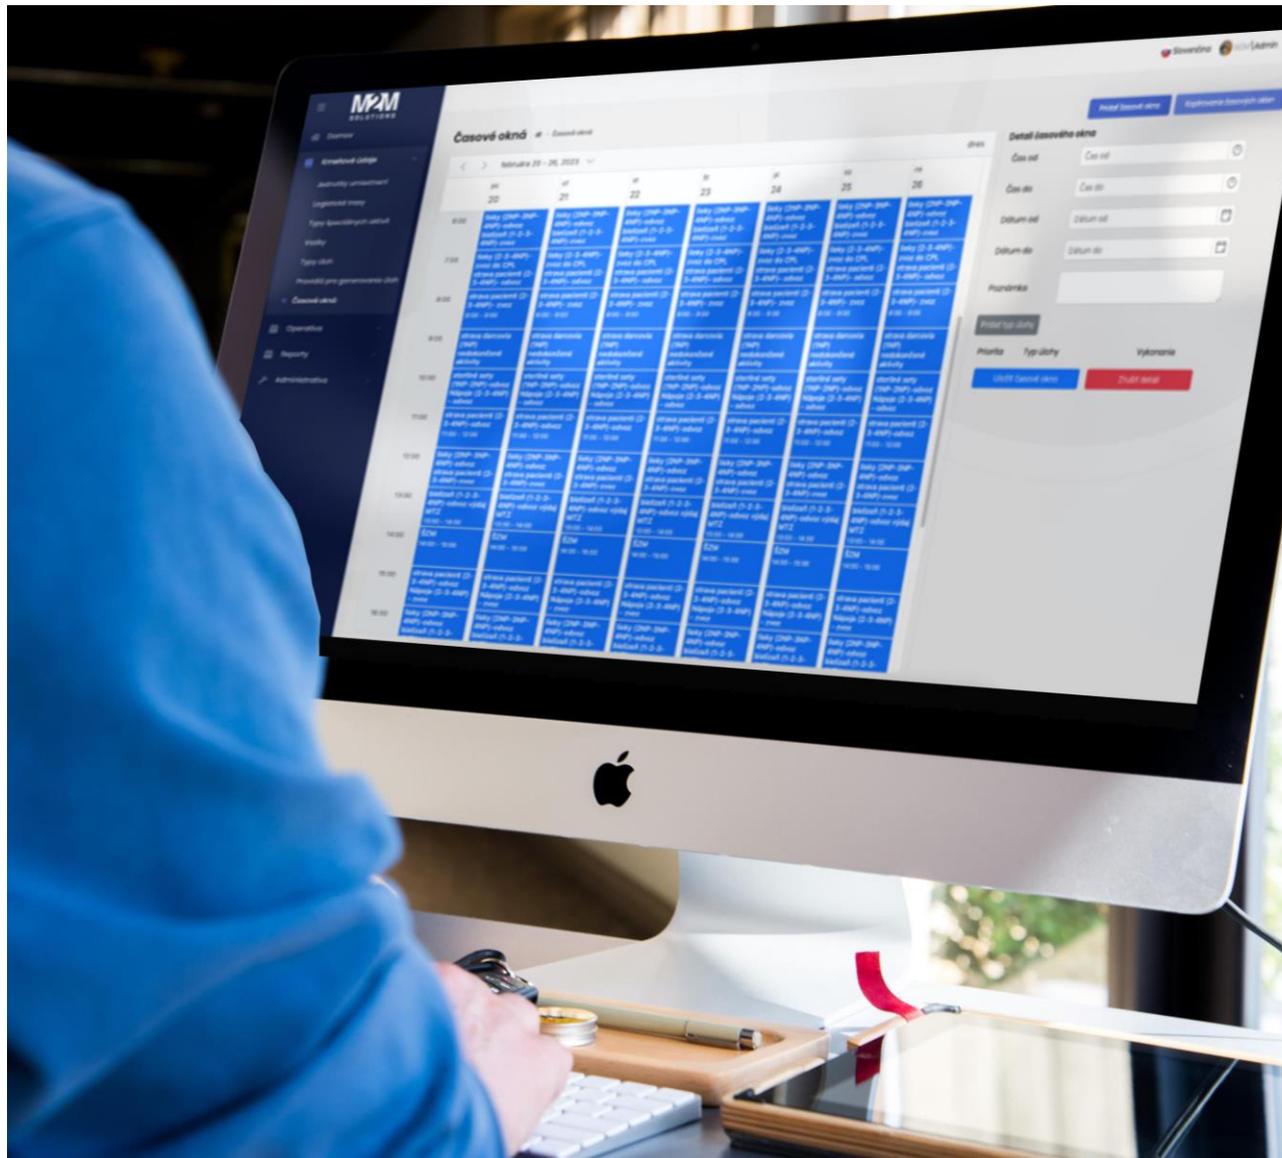

MOST COMMON PROBLEMS:

- The need to reduce employee qualification requirements
- The need for quick training
- Errors caused by human factors
- Workforce issues and turnover

SOLUTIONS:

- Clear navigation
- Multilingual interface for the application and scanners
- Simplification and minimization of communication
- Standardization of processes minimizes the need for constant employee thinking
- Employees don't have to constantly think, which contributes to their well-being
- Future possibility to deploy autonomous mobile robots

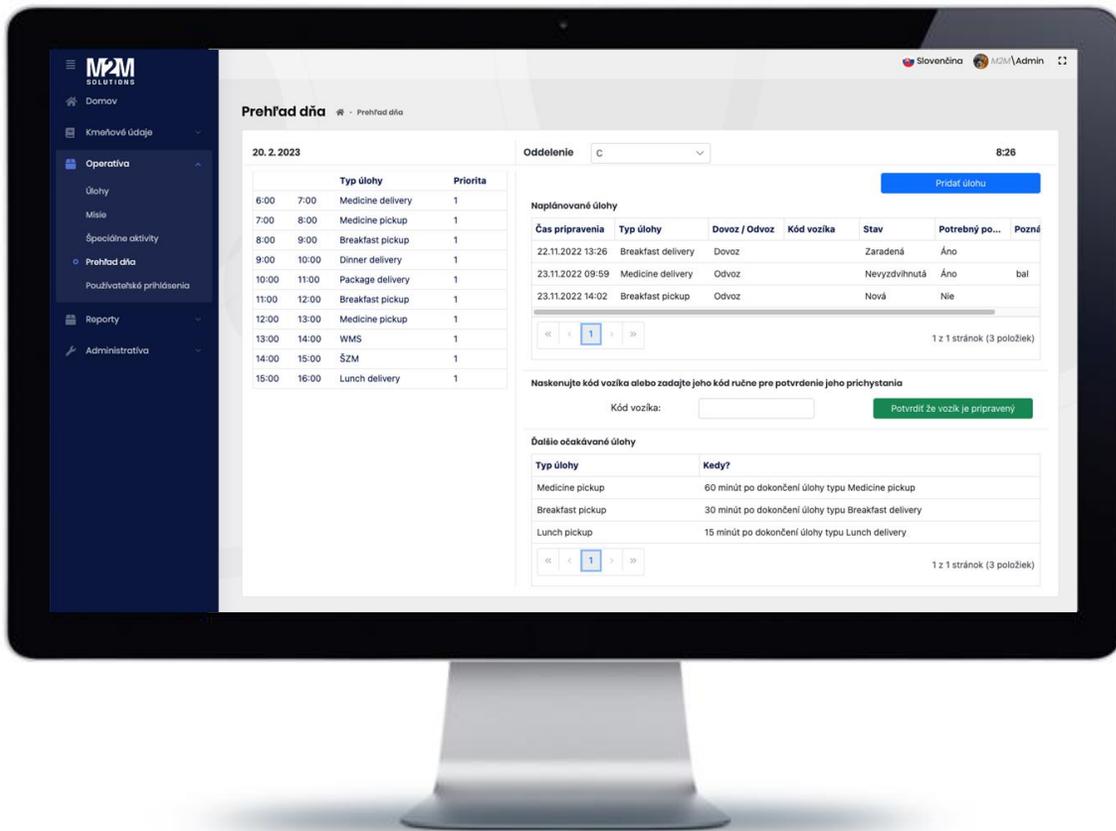

INTERNAL LOGISTICS SOLUTION

- Operational management of the transportation of goods, products, or other commodities within the company
- Clear navigation for logisticians
- Real-time overview of the status of logistics tasks
- Delivery and collection according to a planned schedule within time windows
- Aggregation of transport requests for carts and packages from all applications
- Comprehensive transportation management within the plant

**AGGREGATION OF
TRANSPORT
REQUESTS**

REAL-TIME OVERVIEW

- Real-time overview for logistics manager, warehouse worker, production manager
- Overview of logistics missions completion by logisticians
- Daily overview from the perspective of a logistics point with the current status of corresponding logistics tasks
- Option to add "Priority" tasks, which are executed immediately as soon as the first logistician finishes the current mission

INTERNAL LOGISTICS SOLUTION WITH HANDS-FREE OPERATION

- Hands-free work and saving 10% of logisticians' time compared to conventional devices
- Clear navigation for logisticians (saving 25% of time)
- Minimization of personnel requirements
- Training a new employee is shortened by 85%. Complete tracking of shipment routes and minimization of errors
- Real-time overview of the current status of transports
