Case Study: WMS System Implementation

GEFCO SLOVAKIA, S.R.O.

GEFCO Slovakia is a leading provider of logistics services specializing in the automotive industry, industrial logistics, and vehicle transport.

- **Location:** Bratislava
- **Function:** Logistics and warehousing services for industrial companies
- **Founded:** 2004
- **Employees:** 920

BACKGROUND

Managing warehouse processes involving a high volume of pallets required accurate record-keeping, quick navigation within the warehouse, and efficient use of warehouse space.

Key requirements included FIFO-based put away and picking, traceability of every pallet, and support for quality control.

GEFCO therefore needed a simple WMS system that would guide workers during both put away and picking and provide an online overview of inventory levels.

REQUIREMENTS

- Maximum storage space optimisation (ground/rack)
- 2,000 pallets per day turnover rate
- Storing and picking materials using the FIFO method
- One position can be occupied by 10-20 pallets of the same product
- Ensuring traceability of each pallet
- Covering all quality control processes

OUR SOLUTION

The Warehouse Management product by M2M Solutions has become another system implemented successfully in the automotive sector.

In liaison with GEFCO, a leader in providing logistics services, We created a very easy-to-use solution customised to the process requirements of PSA Peugeot Citroen Slovakia.

OUR SOLUTION

Deployment of a solution using DATALOGIC scanners to navigate the employees in their work. Meeting the completion deadline of six weeks from the date of receipt of the requirements.

- Recommending a location to the operator based on the actual volume of materials in positions
- Navigating the operator when placing in storage and picking
- All steps taken with a barcode reader
- Simple user interface
- On-line overview of stocks

RESULTS

The system has been successfully used since the first day after delivery and achieves the **anticipated benefits**:

- Saving storage space
- Saving FTEs thanks to shorter distances
- Ensuring the supply for a line in time
- Efficient use of human resources and the minimum error rate
- Fast and problem-free personnel training

COOPERATION

"We appreciate the cooperation with M2M Solutions, because of their ability to deliver within a short time a full solution to our warehouse, tailored to our needs. They were also very creative in starting up the system and dealing with the incidents it entailed."

Zuzana Tryzňová,
Country CPSA Manager

We hold further discussions with GEFCO SLOVAKIA to extend our cooperation in the field of warehouse management and to expand the system to other operations as Software as a Service.
